## SUMMARY

Software Engineer (NJIT '25) who ships full-stack and mobile products end-to-end: internal tools adopted by university staff that cut reporting from hours to minutes, and a React Native app with 7.65k downloads. Builds with Python, TypeScript, React, Node.js, FastAPI, and PostgreSQL.

## EDUCATION

### New Jersey Institute of Technology

Bachelor of Science in Computer Science, Minor in Data Analytics

Newark, NJ

Graduated Aug. 2025

## EXPERIENCE

### Software Developer

Mar. 2026 - Jun. 2026

Contempo Space

Passaic, NJ

- Led platform modernization across ERP, e-commerce, and internal systems, migrating off legacy OpenMage/Magento 1 and sequencing ERP before e-commerce so internal workflow changes stayed off the customer-facing path, as the company's only developer
- Designed and built a custom CRM on Frappe after evaluating the off-the-shelf product as insufficiently customizable; shipped v1.0 to production on Frappe Cloud with GitHub Actions test coverage
- Refactored API/GraphQL and CPQ workflows and documented system behavior for developer handoff; evaluated Dynamics 365, BigCommerce, Adobe Commerce, Medusa.js, and Vendure on scalability and operational fit

### Internal Tools Developer Intern

Jan. 2024 - Mar. 2026

NJIT Career Development Services

Newark, NJ

- Built OutcomesHub (Node.js/Express, PostgreSQL, Chart.js) consolidating outcomes from 7-8 sources with RBAC, CSV ingestion, and rollback; supports 15-17k records and cut reporting from 1-4 hours to ~10-30 minutes
- Developed EPI (React, TypeScript, Supabase, Recharts) employer-engagement dashboard with tiered scoring, fuzzy matching (Jaro-Winkler), and automated scorecards across 700+ employers
- Developed CFM (React, Supabase) with realtime updates, kiosk mode, and employer search; scaled for 210+ employers and 750-800 reps, cutting check-in from ~1.5-2 min to ~30-40 sec

### Software Engineering Capstone

Sep. 2024 - Dec. 2024

Merck (Sponsored Capstone Project)

Newark, NJ

- Secured an Ubuntu Azure VM hosting MySQL with SSH key access, firewall IP restrictions, role-based DB access, and audit logging for a 5-person internal workflow modernization project

## PROJECTS

### TasteTrail | React Native, FastAPI, Supabase, Gemini

- Built a React Native app for recipe discovery and GPS restaurant search that reached 7.65k App Store downloads, with a server-side Gemini step-image pipeline behind a content-addressed cache, per-user quota, and 25 pytest tests

### CarVis | Python, PostgreSQL, Dash/Plotly, scikit-learn, Docker

- Rebuilt a 19,000-record car dashboard onto a PostgreSQL star schema with an ETL pipeline that bulk-loads via COPY in one transaction and quarantines every corrected value; added a gradient-boosting price model that halves a median baseline's error

### Automailr | TypeScript, Tailwind CSS, Gmail API, client-side

- Built a client-side Gmail bulk-email platform (CSV upload, templated variables, attachments, retry-failed-only) with a minimal OAuth scope and encrypted session storage; no backend, no database, no tracking

## TECHNICAL SKILLS

**Languages:** Python, JavaScript, TypeScript, SQL, Java

**Frameworks:** React, React Native, Next.js, Expo, Node.js/Express, FastAPI, Django, GraphQL

**Databases & Cloud:** PostgreSQL, MySQL, MongoDB Atlas, Supabase, AWS, Azure

**Tools & AI:** Docker, Git, GitHub Actions, pytest, Linux, Claude Code, GitHub Copilot
